Scientific Support for God Wisdom

Much of the wisdom in the Divine design for meat was confirmed by a 1953 study in which Dr. David Macht of Johns Hopkins University reported the toxic effects of animal flesh on controlled growth culture. A substance was classified as toxic if it slowed the culture's growth rate below 75 percent. In each case, the blood (Lev.3:17) of all animals Dr. Macht tested showed up more toxic than the flesh.

The table below is based on Dr. Macht's study. His results showed that the lower the growth percentage of the culture, the more toxic the flesh. Note the flesh of animals and fish given to us by God for food are all nontoxic, but all forbidden animals lie in the toxic range. (Animals without percentage rankings in the chart were not studied, but are included here to provide a more comprehensive list of clean and unclean meats.)
